

01 Company AI Brain

Every company runs on knowledge that lives in a handful of people's heads. This puts it somewhere the whole team can ask.

01 Connect the sources

Drive, Notion, SharePoint, shared inboxes, contracts

02 Chunk and embed

Documents split into passages, vectorised, stored with source metadata

03 Mirror permissions

Access rules copied from the source system, so answers respect who can see what

04 Ask in plain language

Chat widget in Slack, Teams or the browser

05 Retrieve and answer

Top passages pulled, answer composed with the source cited

Source found	→ Answer with citation
Partial coverage	→ Answers, names the gap
No source	→ Says so, routes to owner
Restricted	→ Points to who can grant access

06 Stay current

Re-indexed automatically when a source document changes

Every answer cites the document it came from.

PRIMARY PAYOFF Institutional knowledge stops living in people's heads.
