

04 AI Calendar Conflict and Load Guard

A founder's calendar collides quietly until someone notices at 8am. This watches it continuously.

01 Watch continuously

All connected calendars, personal and company

02 Detect problems

Double bookings, missing travel time, back-to-back overload, meetings outside working hours

03 Weigh the conflict

Ranked by attendee seniority, deal value, and whether the meeting is external

04 Classify the issue

Each problem handled by type

Hard double booking	→ Reschedule options proposed
No travel buffer	→ Buffer inserted for approval
Overloaded day	→ Lowest-value meeting flagged
Outside hours	→ Surfaced before it is accepted

05 Propose alternatives

Open slots suggested that suit all attendees

06 Notify with options

One message, one click to accept a proposed move

Proposes moves. Never moves anything itself.

PRIMARY PAYOFF The calendar stops colliding.
