

05 AI Founder Research and Decision Agent

Decisions stall because gathering the inputs takes longer than making the call. This does the gathering and then takes a position.

01 Pose the decision

Founder describes the choice in plain language

02 Frame it properly

Real decision isolated, constraints and success criteria confirmed

03 Research both sides

External sources plus internal company data

04 Weigh the options

Cost, risk, reversibility, and time-to-effect compared

05 Assess sufficiency

Whether there is enough to decide on

Enough information	→	Recommendation given
Critical gap	→	Names the missing input
Low stakes, reversible	→	Recommends deciding now
High stakes, unclear	→	Recommends a test first

06 Take a position

One clear recommendation with reasoning, not a menu

07 Record it

Decision and rationale stored for later review

Gives a position, not a list of options.

PRIMARY PAYOFF Decisions stop sitting for weeks.
