

06 AI Meeting Intelligence

Meetings produce decisions that nobody records and work that nobody owns. This closes both gaps before people leave the call.

01 Capture the meeting

Recording or live transcript from the calendar invite

02 Transcribe and attribute

Speakers identified and matched to real people

03 Extract what matters

Decisions, action items, owners, dates, risks and open questions

04 Resolve references

Names matched to team members, topics matched to live projects

05 Sort the output

Each extracted item routed by what it is

Decision	→	Logged with the reasoning
Action item	→	Task created with owner and date
Open question	→	Flagged to the person who can answer
Risk raised	→	Escalated to the project lead

06 Write back

Tasks created in the project tool with owner and due date

07 Distribute

Summary to attendees within minutes of the call ending

Every task links back to the moment it was agreed.

PRIMARY PAYOFF Meetings end with the work already assigned.
