

13 AI Voice-of-the-Customer Engine

Customers tell you what is wrong constantly, across five channels, one complaint at a time. This is what they are saying collectively.

01 Collect every channel

Support tickets, reviews, surveys, sales calls and churn reasons

02 Normalise the sources

Different formats reduced to comparable statements

03 Cluster into themes

Recurring issues separated from one-off complaints

04 Quantify the cost

Frequency, revenue exposed, and direction of travel

05 Classify each theme

Routed to whoever can actually fix it

Product issue	→	Routed to product
Process issue	→	Routed to operations
Expectation gap	→	Routed to sales and marketing
Consistent praise	→	Passed to marketing as evidence

06 Report monthly

Themes ranked by what they are costing

07 Alert on spikes

A sudden rise surfaces immediately, not at month end

Every theme is backed by the customer quotes it came from.

PRIMARY PAYOFF You hear what customers keep saying, not just the loudest one.
