

15 AI Leave and Approval Flow

Leave approval is a five-minute decision that routinely takes a week because the approver lacks the context to answer quickly.

01 Receive the request

Submitted through the existing HR tool or a form

02 Check the entitlement

Balance, accrual and any blackout periods

03 Assess team coverage

Overlapping absences and critical dates checked automatically

04 Determine the path

Straightforward requests move faster

- | | | |
|------------------------------|---|------------------------------|
| Clear and covered | → | Fast-tracked to approver |
| Coverage risk | → | Flagged with who else is out |
| Insufficient balance | → | Returned with the shortfall |
| Clashes with another request | → | Both surfaced together |

05 Route with context

Approver receives the decision with everything already attached

06 Record on approval

HR system, team calendar and payroll updated together

A human approves every request. The system only prepares the decision.

PRIMARY PAYOFF Approvals take minutes, not a week.
